Weak Access Controls Leave Enterprise Networks at Risk

Is your remote access already compromised? Barracuda warns weak credentials and exposed RDP/VPNs fuel LemonDuck, GoldBrute and a 55% spike in password spraying—discover the quick fixes (MFA, patching, monitoring) that cut attack paths.

SOC 2 Compliance Is Reshaping Enterprise Procurement

Buyers now demand proof — not promises. SOC 2 audits are becoming a gatekeeper in enterprise procurement, shortening sales cycles and reducing security friction. Learn why audit scope, Type I vs II, and operational maturity now decide who wins enterprise deals.

Apple Overhauls Chip Roadmap, Ditches M6 Pro and Max for M7 Generation

Breaking: Apple may skip M6 Pro/Max to fast-track AI-centric M7 chips—promising much faster on-device AI (≈240GB/s memory bandwidth) but forcing power users to choose buy-now or wait for 2027 performance leaps. What's next?

Hackers Claim French Employment Leak Exposes Over 1M Records, Health Data

Hackers claim 1M+ French employment records leaked — HR files, health monitoring data and plaintext passwords. This could enable convincing HR/medical scams. Learn which services were hit, the exposed file types, and critical steps workers should take next.

OpenAI's New Custom Chip: 5 Things You Should Know

OpenAI just unveiled Jalapeño — a custom inference chip promising faster, cheaper AI responses. Built in nine months with Broadcom, it could slash inference costs and reduce Nvidia reliance — but real-world benchmarks and scale questions remain.

New License Plate Reader Tech Could Track Phones, AirPods, and Smartwatches

Roadside cameras just got smarter — and more invasive. Leonardo's SignalTrace pairs ALPR with Bluetooth/Wi-Fi/RFID detection to link phones, AirPods, or smartwatches to vehicles, boosting investigations but raising serious privacy and cybersecurity questions. Learn what's at stake.

Apple's MacBook Ultra Is Coming: Everything We Know So Far

Apple's rumored MacBook Ultra could redefine pro laptops: OLED, touchscreen, Dynamic Island UI and next-gen M6/M7 silicon promise huge performance and display gains — but supply-chain delays may push launch. Which features will actually make the cut?

Apple Raises Prices on Macs, iPads as Data Centers Drive Memory Shortage

Apple passed the AI tax to shoppers: memory shortages tied to booming AI data centers bumped Mac, iPad and HomePod prices—mostly \$100–\$500, up to \$1,300 on Mac Studio. See which models were hit and why iPhone escaped
